Necessary Knowledge for Leaving Certificate Exam Success — Research Dossier

TL;DR

- Across every Leaving Certificate (LC) subject, the dominant cause of mark loss is **not lack of content knowledge** but failure to engage with the specific question asked, ignorance of marking-scheme conventions (PCLM in English, SRPs in Geography/History, attempt/blunder/slip in Maths, theory+application+quote in Business, headings/units in Accounting), and time mismanagement caused by over-writing prepared answers. Chief Examiner Reports return to the same complaints year after year: rote-learned material, generic answers, weak interrogation of command words, and incomplete final questions.
- The single highest-leverage piece of "necessary knowledge" for a DEIS-school student is **the SEC marking scheme grammar** — how marks are actually awarded (high/medium/low partial credit, attempt marks, SRPs, ceilings), because almost every common failure pattern can be traced back to a student who didn't know the scheme they were being marked against. Combined with command-word literacy and time-per-mark discipline, this knowledge raises grades independently of subject content.
- The "Necessary Knowledge" tab should be built around **interactive simulators that teach the marking scheme by doing**: a command-word decoder, a PCLM/SRP/attempt-mark mark allocator, a time-per-mark planner with sunk-cost alerts, a sub-task ceiling visualiser for English, a "spot the trap" examiner-pet-peeve trainer, and sanity-check trainers for Maths/Science. Static explanation will not move DEIS-school grades; doing-and-getting-feedback will.

Key Findings

1. **The SEC marking scheme has its own grammar — and most students don't know it.** Each subject has a recognisable scoring architecture (PCLM in English, SRPs at 2 marks each in Geography and most humanities, attempt-mark/blunder(-3)/slip(-1)/misreading(-1) in Maths, "theory + application + quote" capping in Business ABQ, headings/units/cross-referenced workings in Accounting, key-phrase matching in Biology). Students who learn the architecture often outperform students who know more content. RTÉ Dublinacademy
2. **Chief Examiner Reports are remarkably repetitive across subjects and decades.** The same complaints recur from 1995 to 2025: rote-learned material, generic answers, failure to engage with the specific question, formulaic structure, weak language control, poor time management, incomplete final answers. This consistency is itself the most important finding — these are **trainable, structural** problems, not content gaps.

3. **The English PCLM "Purpose ceiling" rule is the single most under-known marking convention.** "Given the primacy of Clarity of Purpose (P), marks awarded for either Coherence of Delivery (C) or Efficiency of Language Use (L) cannot exceed the marks awarded for Clarity of Purpose." A student who writes a beautiful but off-question essay can be capped at 30%—even if their writing is otherwise H1 standard. Examcraftgroup
4. **Time-per-mark discipline is taught implicitly, not explicitly.** Conventions vary by subject (Accounting is famously ~0.45 minutes per mark = 27 seconds; English is ~0.85 mins/mark; Geography is ~1.4 mins per SRP). Students who internalise the per-mark conversion almost never run out of time; students who don't, almost always do.
5. **DEIS-school context matters.** ESRI research shows DEIS students underperform non-DEIS students by a margin (>100 CAO points gap by maternal education) that is not closed by content tutoring alone. Students often have less exposure to the "hidden curriculum" of exam technique — marking schemes, command words, what examiners reward — and benefit disproportionately from explicit instruction in this material. The Irish Times

Details

A. CROSS-CUTTING STRATEGY AND TECHNIQUE KNOWLEDGE

A1. Command Word Interpretation (the single most-cited issue across reports)

The SEC does not publish a unified command-word glossary; each subject has its own marking conventions, but the cross-LC working list is:

- **State / Name / Identify**: 1–2 marks. One word or phrase. No explanation. Most common error: writing a paragraph when one word is wanted.
- **Define**: Give the precise syllabus definition. Examiners hunt for specific key phrases. In Chemistry, "isotope" must include "same atomic number but different mass numbers"; in Biology, definitions are key-phrase-matched. Dublinacademy
- **Outline**: Brief points, often bullet-style. Set out main characteristics. Typically 2–4 points; not full-essay treatment. Elevate Education
- **Describe**: Give an account in your own words. More depth than outline. In sciences, name the key features and stages.
- **Explain**: Show **how** or **why**. Causal/mechanistic. The most-confused word: students describe instead of explaining. The "explain vs describe" distinction is one of the most important in the LC.
- **Discuss**: Examine an issue, including different viewpoints. Implies more than one perspective. Should usually conclude.
- **Evaluate / Assess**: Make a judgement using evidence. In Business, "Evaluate" *requires* the student's own opinion; missing the opinion caps marks. Dublinacademy

- **Justify**: Give reasoned support for a position. Marks awarded for the reasons, not the position itself.
- **Compare**: Identify similarities (and usually differences). Must be integrated, not "all of A then all of B" — the Chief Examiner's repeated point in English Comparative Studies is "best answers were written in an analytical fashion". Irevise
- **Contrast**: Identify differences only. Elevate Education
- **Analyse**: Break into components and show relationships. In English, the Chief Examiner explicitly states this means "first present your point, and then discuss why this similarity or difference between the two texts exists". Irevise
- **Examine**: Investigate closely (in Geography, often drives the SRP requirement). Elevate Education
- **To what extent / How far**: Argue for and against; the answer must take a position.

Common command-word failure patterns from CERs:

- Treating "Discuss" and "Explain" identically (loses the second perspective).
- Treating "Evaluate" as "Describe" (no judgement = capped marks in Business, History, Politics & Society).
- Ignoring the **modifier** in front of a command word: "significant insights", "effective use of disturbing imagery", "deeply embedded values" — the modifiers are where the Purpose marks live in English. Sccenglish

A2. Mark Allocation — How SEC Marking Schemes Actually Work

The published Maths scheme convention (also widely used in other quantitative subjects):

- **Scale 5B (0, 2, 5)** — partial credit for "any correct, relevant step". Studocu
- **Scale 5C (0, 2, 3, 5)** — low partial / high partial credit bands. Studocu
- **Scale 10C (0, 4, 7, 10)** — three-band partial credit. Studocu
- **Scale 10D (0, 3, 5, 8, 10)** — low / mid / high partial credit (most common 10-mark question). Studocu

Maths penalty structure (explicit in every published scheme):

- **Blunders (B)** — mathematical errors / omissions: **−3 marks**.
- **Slips (S)** — numerical slips: **−1 mark**.
- **Misreadings (M)** — provided task is not oversimplified: **−1 mark**. Irevise
- **Attempt mark** — typically 30–40% of the part's marks for any **correct, relevant step**, including writing down the correct formula from the Tables and Formulae booklet. *"If you write nothing the examiner cannot award any marks."* Galway Maths Grinds Galway Maths Grinds

- **Worthless work** = 0 marks (e.g. writing the question back, copying numbers without a relevant step).
- **Hit-or-miss** = no partial marks: all or none. Irevise
- **Note**: "Accept correct answer without work" appears on some short scales, meaning the answer alone scores full marks even with no working — but this is rare; the safe default is always show working. Studocu

English PCLM (Paper 1 and Paper 2 narrative answers):

- **P — Clarity of Purpose**: 30%. Engagement with the actual task asked. Gillian Chute
- **C — Coherence of Delivery**: 30%. Logical structure and sustained argument. Gillian Chute
- **L — Efficiency of Language**: 30%. Genre-appropriate, controlled language. Gillian Chute
- **M — Mechanics**: 10%. Spelling, grammar, punctuation. Gillian Chute
- **CRITICAL CEILING RULE** (in every English marking scheme): *"Given the primacy of Clarity of Purpose (P), marks awarded for either Coherence of Delivery (C) or Efficiency of Language Use (L) cannot exceed the marks awarded for Clarity of Purpose."* This means an off-question essay cannot exceed roughly 30% no matter how well written. Examcraftgroup

Geography SRP system:

- **SRP = Significant Relevant Point** = a single piece of factual information worth typically **2 marks.** RTÉ
- 30-mark essay = **15 SRPs.** Most teachers tell students to aim for 17 to be safe. Kilkenny People Geography
- A diagram with annotation can score SRPs (label = 1 SRP; annotation explaining the process at that point = additional SRP). Educateplus
- **The Marking Scheme states**: "each SRP should emerge from the information put forward by the candidate, leading to an overall coherent response to the question". Identical sentences across two students may score differently — context matters.
- 80-mark essay (e.g. Option) = ~3 paragraphs of 20 marks (4 marks for aspect + 8 SRPs) **plus 20 marks for overall coherence.** Dublinacademy

Business marking conventions:

- **SRPs** appear here too: long questions are marked in SRPs.
- **ABQ (Applied Business Question)** has the "Theory + Application + Quote" rule. Theory alone is capped (often at ~50%). The marking scheme requires **direct quotation from the case study text** to access full marks. Formula taught widely: **State (Theory) + Explain (Detail) + Link (Quote).** Dublinacademy
- "Evaluate" questions require the student's own opinion explicitly stated.

Accounting marking conventions:

- Headings and units are mark-bearing. Typical penalty: **−1 mark per heading omitted** (e.g. "Profit & Loss Account", "For the year ended 31/12/20XX", "Authorised Capital"). Windows
- The € sign and % sign are required.
- **Cross-referenced workings**: workings must be visible and labelled (W1, W2…). The "calculator trap" — calculating an adjustment in your head and writing only the final figure — forfeits all partial marks if the final figure is wrong. Dublinacademy
- **Time per mark in Accounting = ~0.45 mins/mark (27 seconds)**. Dublinacademy

Biology marking conventions:

- Section A short questions: typical pattern is **first six correct = 3 marks each, last correct = 2 marks** (varies by question type), or **first correct = 8/10 marks, then declining**. The precise pattern is published yearly. Folens Folens
- Diagrams typically worth **9 marks (6 for diagram + 3 for labelling)**. Folens
- Key-phrase matching: examiners look for specific phrases (e.g. function of myelin sheath = "to insulate" or "to speed up the transmission"). Marking schemes list acceptable phrasings. Folens
- **Bullet-point format is preferred** over prose — examiners can find key points faster, and the question demands "5 key points" type answers. Folens
- Spelling errors ignored if intent is clear. Folens

History marking conventions:

- **Documents-Based Question (DBQ)** worth 100 marks (20% of paper). Four question types: Comprehension (~20–40 HL/OL), Comparison (20), Criticism (20), Contextualisation (40 HL). Issuu
- Long-question essays: marks for **cumulative marks per significant relevant point**, with overall marks for coherence.
- **Research Study Report (RSR)** worth 100 marks (20% of paper): Outline Plan (15) + Evaluation of Sources (25) + Extended Essay (50) + Review of Research Process (10). HL: 1,200–1,500 words; OL: 600–800 words. Historyvault Wicklow County Council

Modern Languages (French / German / Spanish):

- **Oral**: 25% (HL) or 20% (OL). Marked on Pronunciation (20%), Vocabulary (20%), Structure (30%), Communication (30%). French Notes
- **Written paper**: opinion pieces marked on Communication and Structure (60% of 100 marks). Listening worth ~20%.

- **Bonus marks for answering in Irish**: 10% bonus for marks ≤75% (5% in maths, accounting); does not apply to language papers where target language is required, nor to English/Irish papers themselves. Citizens Information

A3. Time Allocation Strategy

General LC time-per-mark conversion (approximate):

- **English Paper 1 (170 marks, 170 mins)**: ~1 min/mark → 50 mins composition (100 marks), 50 mins comprehension Q A (50 marks), 50 mins Question B (50 marks), 20 mins read/plan/check.
- **English Paper 2 (200 marks, 200 mins)**: 50 mins single text (60), 70 mins comparative (70), 45 mins poetry (50), 20 mins for unseen poetry. Comparative is the main reason students run out of time for poetry. Leavingcertenglish
- **Maths Paper (300 marks, 150 mins)**: 0.5 mins/mark.
- **Geography (400 marks, 170 mins)**: 1.4 mins/mark — short questions ~20–30 mins for 80 marks; each Part B/C (30 marks) = 15 mins; option essay (80) = 35 mins. Kilkenny People RTÉ
- **Business (400 marks, 180 mins)**: ABQ 45 mins (80 marks) + Long Questions 27 mins each (60 marks). Dublinacademy
- **Accounting (400 marks, 180 mins)**: 27 sec/mark; Section 1 (120) = 54 mins; Section 2 = 90 mins; Section 3 (80) = 36 mins. Dublinacademy
- **Irish Paper 2 poetry**: stick to 15-mark / 9-mark / 6-mark pacing strictly. RTÉ

Sunk-cost rule: when the time allocation for a question expires, **move on, even with a part-answer**. Examiners and study guides repeat: "Prioritise attempting all required questions over completing just a few in full." A part-answer to an unstarted question scores higher than a perfected answer to one already attempted. The Irish Times

A4. Question Choice Strategy

- **Read the entire paper first** (5–10 mins). Mark intended questions (✓), backups (✓?), avoids (✗). The Irish Times Kilkenny People
- **Watch for hidden traps in chosen questions** — e.g. a "discuss" sub-part inside a question that looked descriptive at first glance.
- **The "study roulette" warning**: in 2024 LC History, students who only studied the Treaty for the DBQ found Belfast WW2 instead. Cross-coverage matters more than single-topic depth. The Irish Times
- **Sunk-cost fallacy in question choice**: students cling to chosen questions because they've already started; better to bail at 5 minutes if it's not flowing than at 25 minutes when too much time is gone.

- The **PCLM Purpose ceiling** described above is the most dramatic example.
- In Comparative Studies (English), if the rubric says answer on **three texts** (which is typical), referring to only two **caps the mark**. The Chief Examiner's Report is explicit: "candidates… should be prepared to refer to three texts" and "you cannot answer on two films". Leavingcertenglish Leavingcertenglish
- In Geography, the option essay (80 marks) requires named examples — missing them caps each paragraph.
- In Business ABQ, missing the quote caps the application mark even with perfect theory.
- In History RSR, exceeding the word count incurs penalties; missing required sub-sections (Outline Plan, Evaluation of Sources, Extended Essay, Review of Process) loses marks for those sections specifically.

A6. Presentation, Layout, Diagrams, Units

- **Black or blue pen only**; pencil only for diagrams/sketches/graphs. Folens
- **Anything written outside the answer area may not be seen** (papers are scanned). Folens
- **Single line through errors** — never use correction fluid; visible work may still earn marks. Revise
- **Diagrams**: title; label; in many subjects, **annotate** (write a short sentence explaining the process) — this is the difference between "labelling" and "annotating" and is mark-bearing in Geography and Biology. Dublinacademy
- **Graphs (Physics/Chemistry/Maths)**:
  - Fill at least three-quarters of the page. Scribd
  - Label both axes with quantity **and units**.
  - Independent variable on x, dependent on y (y = f(x) convention). Weebly
  - Mark each point as a dot inside a small circle. Scribd
  - Draw a best-fit line, not "join the dots", unless explicitly required. Scribd
  - Use a transparent ruler. Scribd
- **Units in scientific calculations**: missing units commonly costs the final mark; using wrong unit (e.g. cm^3 instead of m^3 in pV=nRT) is one of the most common Physics/Chemistry errors. Temperature must be in Kelvin in gas-law calculations. Dublinacademy
- **State symbols (s, l, g, aq)** required in Chemistry equations like Heat of Formation, or marks deducted. Dublinacademy
- **Significant figures**: round only at the end of a calculation; round to the same significant figures as the least precise data given. Dublinacademy

- **Workings**: in Maths/Accounting, an answer with no working can score 0 even if correct in some schemes; an answer with working can earn the attempt mark even if final answer is wrong.

B. SUBJECT-SPECIFIC COMMON FAILURE PATTERNS

B1. English — Higher and Ordinary

Sources: Chief Examiner Reports 2001, 2005, 2008, 2013 (most recent). Plus widespread teacher commentary.

- **The 1995 CER** observed that "many students even very good ones… can no longer write grammatically. Their writing is frequently illogical, muddled and at times incomprehensible. Yet they appear to think they are making sense." This complaint has persisted. The Irish Times
- **The 2013 Report**: "examiners were impressed by evidence of strong textual knowledge and also the variety of approaches to the analysis of texts. Weaker responses tended to be characterised by an over-rehearsed formulaic approach." Leavingcertenglish Irevise
- **Comparative Studies** is the section where most marks are lost: students write 9 pages when 5 are wanted; rely on memorised "modes"; treat texts in sequence rather than analytically; refer to two texts when three are required. Leavingcertenglish
- **Composition (100 marks)**: choosing the wrong genre is the commonest cap on marks; confusing personal essay with discursive; failing to sustain register; failing to integrate the prompt's specific phrasing.
- **Single Text**: summarising the plot when the question asked for analysis is the perennial problem ("am I summarising?" is the question to ask yourself). The Irish Times The Irish Times
- **Poetry**: "Eavan Boland syndrome" — putting all eggs in one poet's basket. The Chief Examiner has multiple times noted that "personal response should be central" but candidates "memorise" instead. The Irish Times Irevise
- **Comprehension Question A**: students re-phrase rather than infer. The 2013 report explicitly says students must "draw inferences… synthesize the material, and question or critically evaluate it". Leavingcertenglish
- **Comprehension Question B**: students treat it as another composition (too long, too literary). It is a 50-mark functional task. Genre conventions matter (letter, speech, blog, podcast script, etc.).
- **Persistent issue**: "challenging the terms of a question, perhaps disagreeing with some part or the entire premise outlined, is an acceptable way in which to approach an answer" — students don't realise this and write what they think the examiner wants. Revise

Sources: Chief Examiner Report 2015 (Project Maths era).

- **The chronic complaint**: "Many candidates fail to answer the exact question asked, and give the answer in the required form with the appropriate unit." Revise
- **Show working**: the marking scheme rewards any correct, relevant step. Starting attempts is critical — "if you write nothing the examiner cannot award any marks". Revise Galway Maths Grinds
- **Don't force the correct answer when given in the question**: "Candidates should… state their conclusions based on their own work." Revise
- **Be prepared for the unfamiliar**: "the examination paper would not be fit for purpose if the candidates recognised everything on it." Revise
- **Algebraic manipulation**: persistent weakness, particularly with negative numbers, fractional coefficients, and substitution.
- **Geometric instruments**: students lack practice with compass/protractor; must know triangle "centres" (incentre, circumcentre, orthocentre, centroid) and how to construct them. Revise
- **Definitions/proofs**: students do not need to reproduce learned-off statements but must be able to "state or explain these reasonably clearly". Memorised proofs that fail under question rephrasing lose marks. Revise
- **Project Maths-era trap**: questions in unfamiliar contexts; students who relied on past papers are caught. The 2024 and 2025 papers continued the trend of "drawing from all corners of the course". Topics shift between Paper 1 and Paper 2 — there is no guarantee. RTÉ
- **Sanity check**: order-of-magnitude check on every calculation; if you find a person's height is 800m, something is wrong.

B3. Irish (Gaeilge)

Sources: NCCA Background Paper for the Review of LC Irish (drawing on multiple CERs); RTÉ and Irish Times teacher commentary from corrector-teachers.

- **Oral (40% of grade)**: rote-learned material is the dominant problem. Examiners report "every student spoke about liking the same TV programme"; students "view the oral examination as a test of memory, rather than as a personal, individual conversation". The Irish Times + 2
- **Pronunciation**: examiners are strict on differentiating tenses (especially past tense ending pronunciation); confused tenses cap communication marks. French Notes
- **Listening to the question**: "students often hear 'Schule' and jump straight into 'my school is called…' when actually the question was 'how do you get to school?'"

- **Ceapadóireacht (composition, 100 marks, 16.7% of grade)**: simpler accurate Irish scores higher than ambitious Irish full of grammatical errors. Corrector-teacher quote: "I've seen a lot of students try to learn material that's too difficult for them. They then try to reproduce this material in exam settings and… there's loads of mistakes." gaeilgeoir The Irish Times
- **Aiste essay length**: 500–600 words; ~2.5 pages. Don't pad with English film/band lists. Blogger
- **Léamhthuiscint (comprehension)**: must answer in the student's own words; lifting phrases from the passage caps the mark. The Irish Times
- **Prós/Filíocht**: 3–4 quotations memorised per text required; students who rely solely on summary lose marks. The Irish Times
- **Common participation issue**: 82% of LC students sat Irish in 2025 (down from higher figures), reflecting wider availability of exemptions. DEIS schools have a particularly high exemption uptake. National Council for Curric…

B4. Sciences — Biology, Chemistry, Physics

Biology:

- Three sections: A (short, 100 marks/25%), B (experiments, 60 marks/15%), C (long, 240 marks/60%). Folens
- **Experiments (Section B)**: exam questions overwhelmingly cluster on a known list of 22 mandatory practical activities. Students who know the diagrams, procedures, and definitions for each can secure ~15% of paper. RTÉ
- **Definitions**: marking schemes hunt key phrases. Missing one phrase = lost mark.
- **Bullet-point format preferred** for "5 key points" questions.
- **Diagrams**: 9 marks typical (6 + 3 labelling).
- **Common errors**: confusing "function" with "importance"; weak ecological vocabulary; failing to give 5 key points when asked.

Chemistry:

- **Mole calculations (titrations)**: most common errors — not converting cm^3 to m^3, missing the 1:2 stoichiometric ratio, stopping at moles per litre when grams per litre is requested, dividing by wrong volume. Dublinacademy Dublinacademy
- **Organic nomenclature**: Propan-1-ol vs Propan-2-ol matters; "Propanol" alone may not score. Dublinacademy
- **Definitions**: "Isotope" must include "same atomic number but different mass numbers". "Homologous Series" must include "same general formula, similar chemical properties, gradation in physical properties" — missing any phrase loses marks. Dublinacademy Dublinacademy

- **State symbols**: required in thermochemical equations.
- **Mandatory experiments**: Q1 typically titration (heavily weighted to redox titrations recently — Iron Tablet, Iodine/Thiosulfate, Bleach); Q2 typically organic preparation (Ethene, Ethyne, Clove Oil, Soap). Dublinacademy
- **Rounding**: keep full value on calculator until the final step. Dublinacademy

Physics:

- **Units convention**: lower case for spelled-out units (newtons, joules, volts); upper case symbols only for units named after physicists (J, V, but kg). Weebly
- **Penalty types** (per Mills/Kelly summary of marking scheme): **Slips (S) −1; Blunders (B) −3; Misreading (M) −1**; serious blunders that oversimplify the question = attempt mark only. RTÉ
- **Graphs**: scale, axis labels with units, dot-in-circle plotting, best-fit line, appropriate slope calculation (not via formula when graph is required) — common mark loser. Windows
- **Section A (mandatory experiments)**: 30% of paper; "settle nerves before you even look at section B". Instituteofeducation
- **"Average of an average is not an average"**: in u/v experiments, average u and v separately *then* calculate f, not the reverse.
- **Definitions**: drawn from formulae (e.g. Newton derived from F = ma). RTÉ
- **Demonstrations**: not the mandatory experiments, but 8 demonstrations students should be able to draw and describe. RTÉ

B5. History

Sources: 2017 Chief Examiner's Report (most recent for History).

- **Chronology**: weak chronological control is a perennial issue at Ordinary Level.
- **DBQ (100 marks, 20% of paper)**: comprehension/comparison/criticism/contextualisation. Common error: weakness in "criticism" — failing to identify bias, propaganda, or limitations of the source. The 2017 report noted: "Very few were able to use quotations from the documents to show the strengths" and weaknesses. Pdst
- **Source criticism rubric**: students should master the "5 Ws" of source analysis (Who, What, When, Where, Why) and apply them habitually. Pdst
- **RSR (100 marks)**: OUTLINE PLAN (15) + EVALUATION OF SOURCES (25) + EXTENDED ESSAY (50) + REVIEW OF RESEARCH PROCESS (10). Common errors: vague Review of Process ("I researched on the internet"); only 2 sources at HL when 3 required; word count over (penalties); poor source evaluation. Historyvault Wicklow County Council
- **Long-question essays**: introduction + paragraph for each named factor + conclusion. Marking by paragraph from Q4 onwards. Pdst

- **Predictions backfire**: 2024 paper had Treaty/Belfast WW2 reversal of expectations; 2025 had unexpected Lord Brookeborough/Coleraine repeats. Cross-coverage of case studies is essential. The Irish Times

B6. Geography

Sources: 2012 Chief Examiner's Report (most recent for Geography).

- **SRP economy** is the central conceptual frame; see A2 above.
- **Short questions (Q1–12)**: 80 marks (20%). Best 10 out of 12. Common loss: spending 30 minutes when 20 is enough — extra time taken from later essays. Dublinacademy
- **OS map/aerial photo skills**: grid references, distance, area calculation, line distance, photo angle — repeatedly cited as where weaker students lose easy marks. Practice past-paper short questions exhaustively. Dublinacademy Kilkenny People
- **Annotated diagrams** vs **labelled diagrams** — annotation (process explanation written on the diagram) earns SRPs; mere labelling does not. Dublinacademy
- **Process vs landform confusion**: if a question asks for the formation of a landform (e.g. waterfall), focus on the landform; if it asks for processes (e.g. erosion), focus on processes.
- **Geographical Investigation (GI) report**: 20% of marks. Specific sub-section structure required; common errors include poor referencing and failure to link findings to research question. Dublinacademy
- **Option essay (80 marks)**: 20-mark coherence allocation; missing structure caps marks.
- **Geoecology** (option) is the most stable in topic-rotation analysis. Dublinacademy
- **"Manipulating answers" rule**: structure matters only in the option essay; in other long questions, SRPs can be in any order. 625points

B7. Business / Accounting / Economics

Business:

- **ABQ** (Applied Business Question, 80 marks, 20%) is compulsory. **Theory + Application + Quote** rule. Missing the quote caps marks. "Evaluate" requires student opinion.
- **Long questions**: 4 of 7 worth 60 marks each; SRPs apply. Dublinacademy
- **"Anchor" topics in Section 3**: Q1 = People/Conflict/Contract Law; Q2 = Domestic Environment; Q3 = International Trade/EU/Global Business. High consistency. Dublinacademy
- **Common loss**: students "over-write" on questions they like (e.g. answering 9 questions when 6 needed) and run out of time. Gavinduffybusiness

Accounting:

- "Cardinal sins" identified by teachers/markers: incomplete headings, missing € or %, missing date headings, "invisible workings" (calculator trap), missing cross-references. Dublinacademy
- **Marking scheme penalty**: "Penalise 1 mark each for the omission of two headings" type rules are explicit. Windows
- Q1 typically 120 marks: rotation between Sole Trader, Company, Manufacturing — students should master 2 of 3 to guarantee a viable Q1. Dublinacademy

Economics:

- Choice trap: 6 out of 9 questions; answering 9 (as in cited teacher example) costs time and dilutes marking quality of best answers. Gavinduffybusiness
- **Definitions** are key-phrase matched.
- **Diagrams**: must label axes, curves, equilibrium points; explain shifts.

B8. Modern Languages (French / German / Spanish)

Sources: 2016 SEC CER (French, Spanish, Italian).

- **The 2016 report** is the most quoted: students relied on "long sections of learned-off material… If the examiner intervened gently, in order to try to elicit a more authentic response, many candidates persisted with their prepared paragraphs." French Notes
- **Authenticity issue**: "every candidate expressed a liking for the same TV programme, the same school subject, or the same film or book." French Notes Irish Examiner
- **French** structure-and-communication errors (60% of oral marks): tense confusion (passé composé / imperfect / conditional / subjunctive); être vs avoir errors ("Je suis 18 ans" vs "J'ai 18 ans"); pour/pendant/depuis confusion. Windows Windows
- **Pronunciation errors**: -ier vs -ière; ch (chimie); silent t at end of words; pression vs press-ee-on. Windows
- **Written paper opinion piece**: students lift "generic statements, clichés, or proverbs which were often inaccurately written". Irish Examiner
- **German**: students hear keyword and answer the question they expected, not the question asked.
- **Spanish**: rote-learning culture explicitly criticised by 2016 CER. Irish Examiner
- **Foreign-language novel / film question**: evidence in CER that students answered on the English translation or the film version of a foreign-language novel — capped or zeroed. Irish Examiner

B9. Home Economics

Sources: 2017 Chief Examiner's Report.

- **Wrong elective answered**: "each year candidates attempt the incorrect elective or parts of different elective questions and lose substantial marks as a consequence." Revise
- **Coursework**: black or blue pen only; pencil fades. **Examiners only mark what is on the journal pages** — additional inserted material is not awarded any marks. Revise
- **Higher-order thinking gap**: "Students generally performed well in recalling basic facts, particularly in the short question section, though higher-order thinking skills, such as analysis and evaluation, proved challenging, especially at ordinary level." National Council for Curric...
- **Textiles, Fashion & Design coursework**: 0.5% of students opt for this elective — niche. National Council for Curric...
- **Time over-allocation**: CER repeatedly notes candidates exceeding the 15% time allocation for coursework. National Council for Curric...

B10. Construction Studies / Engineering / DCG

Construction Studies coursework: A. Planning (40), B. Report (35), C. Manipulative Skills (40), D. Completion (incl. creativity, finish quality). Studyclix

- **Cross-referencing in design folio** essential.
- **Photographic evidence and sequence of manufacture** mandatory in report. Studyclix

Engineering: similar structure (project + practical + written 50%). Simplestudy

Common pattern: students under-prepare the **report/folio** because the artefact is the visible work. The folio is where many marks are lost or gained.

B11. Religious Education / Politics & Society / Art

Religious Education: examined infrequently as a CAO subject; small cohort. Common pattern: confusing personal opinion with reasoned evaluation.

Politics & Society (introduced 2019): contains a **Citizenship Project (Report of an Action / Research Project)** worth 20%. The written paper has data-interpretation, short, and essay questions. Common errors: failing to apply concepts to specific cases; treating questions as opinion when reasoned argument is required.

Art:

- **History & Appreciation paper** is the source of most lost marks. Students hate it, find it boring; the 2024/2025 papers' "gallery question" has caught students who only prepared the National Gallery (specifying "local gallery" once). boards.ie ISSU
- **Discussion** is the weakest aspect: "students put pressure on themselves to know dates and ignore development, characteristics, influences". boards.ie

- **Practical**: portfolio building plus life sketching.

C. CROSS-CUTTING EXAM STRATEGY CONCEPTS

C1. Sanity-Check / Verification Habit

- **Order of magnitude check**: a person can't be 800 m tall; pH is between 0 and 14; a probability is between 0 and 1.
- **Units consistency check**: did you keep cm^3 throughout, or convert when needed?
- **"Does this make sense?" pause**: 30 seconds at the end of any calculation.
- **Re-read the question**: did you find x or did you find what was asked?

C2. Reading the Question vs Answering the Question You Wished Was Asked

- The most damaging exam habit. Specifically called out in English ("answer the question you are asked – NOT the question you would like to be asked"), French, Irish, History. Thoughts...
- **Anti-pattern**: writing a learned-off essay on Eavan Boland and bending the question to fit. **Antidote**: rewrite the question in your own words at the top of your answer.

C3. Drawing Diagrams and Labelling

- **Pencil and ruler** for diagrams in most subjects.
- **Labels**: every key feature.
- **Annotation** (in Geography especially): a sentence explaining the process at that location, not just naming the feature.
- **Title every diagram**.
- **Scale** on graphs.

C4. Working Shown — When Partial Credit is Awarded

- In Maths/Sciences/Accounting: writing the relevant formula = attempt mark (often 30–40%). Galway Maths Grinds
- "Work of merit" language: low partial credit even for a relevant first step.
- "Hit-or-miss" exceptions: some short scales score all-or-nothing.

C5. Coursework / Practical → Written Paper Connection

- In Biology, Section B (15%) maps directly to mandatory experiments practised in lab.
- In Chemistry, Q1 (titrations) and Q2 (organic prep) likewise.

- In Construction/Engineering, the **artefact builds the language** for the written paper.
- In History, the **RSR research process** trains source criticism for the DBQ.
- In Languages, the **oral practice** trains comprehension for the listening exam.
- Failing to use coursework as preparation for the written paper is a missed opportunity.

C6. How "Predicting" / "Spotting" Backfires

- 2024 LC History: Treaty was widely tipped for DBQ, didn't appear; Belfast WW2 came instead. The Irish Times
- 2025 LC Maths: drew from "all corners of the course" including unexamined territory.
- 2025 LC History: minor topics from 2024 reappeared, surprising students. RTÉ
- **Rule**: cover the full syllabus; predictions are insurance, not strategy.

C7. CAO Points / Grade Boundaries

Current scale (since 2017):

Grade	Range	HL Points	OL Points
H1 / O1	90–100%	100	56
H2 / O2	80–<90%	88	46
H3 / O3	70–<80%	77	37
H4 / O4	60–<70%	66	28
H5 / O5	50–<60%	56	20
H6 / O6	40–<50%	46	12
H7 / O7	30–<40%	37	0
H8 / O8	<30%	0	0

- **H7 was new in 2017** — gives 37 points for 30–39% to encourage HL uptake. Equivalent to O3. Griffith College Breakthrough Maths
- **Bonus 25 points** for HL Maths H6 or above. spunout
- **Bonus 10% / 5% for answering through Irish** in non-language subjects (5% for Maths/Accounting; 10% for most others), only if marks <75%.
- **Threshold logic to teach**: a H7 in HL = same points as O3 in OL — meaningfully reduces the "drop down to OL" pressure.
- **Top six subjects** counted; competitive courses regularly require 500+ points. The Irish Times

C8. The DEIS Context

- ESRI 2024 research: 100+ point gap between children of graduate mothers and those whose mothers have Junior Cycle education or less. The Economic and Social R...
- Even adjusting for social background, DEIS students have lower grades than mixed schools. The Irish Times The Economic and Social R...
- **Implication for the app**: DEIS students benefit disproportionately from explicit "hidden curriculum" instruction — marking schemes, command words, time-per-mark — which their non-DEIS peers may absorb informally from family or supplementary tutoring.

D. WHAT CHIEF EXAMINER REPORTS KEEP SAYING (PERENNIAL COMPLAINTS)

Synthesising across English (2001/2005/2008/2013), Maths (2015), French/Spanish/Italian (2016), History (2011/2017), Home Economics (2017), Geography (2012), and others:

1. **"Generic answers that don't address the specific question"** — every CER, every subject. Students bring prepared material and force-fit it.
2. **"Rote-learned material"** / **"rigid and formulaic approach"** — explicitly cited in English (2008, 2013), French (2016), Spanish (2016), Italian (2016), Home Economics (2017). Leavingcertenglish
3. **"Failure to use prescribed terminology"** — cited in Sciences, Geography (key terms), History (historical concepts).
4. **"Poor time management evidence — incomplete final answers"** — cited in English Comparative (running out of time for poetry), Maths (running out on Section B), Geography (running over on short questions).
5. **"Memorising essays instead of using words and phrases they know"** — explicit French CER advice.
6. **"Lack of authenticity"** — French oral, every student liking the same TV programme.
7. **"Failing to refer to all required texts"** — English Comparative, foreign-language novels.
8. **"Not engaging with the question"** — every subject.
9. **"Spelling and grammar control"** — English specifically; in language subjects too.
10. **"Working not shown"** — Maths, Chemistry, Physics, Accounting.

What separates a top-grade answer from a middle one:

- **Question-facing commentary**: top answers consistently echo and engage the question's specific phrasing.

- **Personal voice**: top answers in English and Irish offer authentic personal response, not memorised. The Irish Times
- **Modifier awareness**: top answers pick up on "significant", "effective", "disturbing", "deeply embedded".
- **Integrated comparison**: top answers in Comparative weave texts together rather than serially.
- **Quotation precision**: top answers integrate quotes into the grammar of the sentence rather than dropping them in. Leavingcertenglish
- **Workings traceability** in quantitative subjects.
- **Brevity discipline**: top answers don't waffle to fill space. The Irish Times

---

E. INTERACTIVE LEARNING ELEMENT CONCEPTS

For each concept below, the educational claim is that *doing* the task (rather than reading about it) is what builds the necessary knowledge. All are designed to feel ambitious and DEIS-appropriate (high signal, low jargon).

E1. Command Word Decoder

- Paste in any past-paper question; the tool highlights command words and modifiers, classifies the question's demand level (state / explain / discuss / evaluate), and outputs a structural template ("for Discuss: 3 perspectives, balanced, conclusion required").
- "Modifier hunter" sub-mode: highlights words like "significant", "effective", "disturbing" that change what the answer must do.

E2. Marking Scheme Simulator (Per-Subject)

- For English: PCLM Allocator. Student writes (or pastes) an answer; the tool asks: did you address the specific question? (P) Is it structured? (C) Is the language genre-appropriate? (L) Mechanics check (M). Outputs a percentage estimate per band — and shows the **Purpose ceiling effect** if P is low.
- For Geography: SRP Counter. Student writes a paragraph; tool tries to identify SRPs (with student confirmation), shows mark estimate at 2 marks each, alerts at 15 / 17 SRPs.
- For Maths: Attempt-Mark Visualiser. Show the question, the marking scale (5B, 5C, 10C, 10D), and let student walk through partial credit by step. Shows Slip (-1), Blunder (-3), Misreading (-1) penalties applied to a sample wrong attempt.
- For Business: ABQ Theory+App+Quote Checker. Student pastes ABQ answer; tool flags missing quotes from text, missing theory, missing application.
- For Accounting: Heading & Cross-Reference Auditor. Student pastes a final account; tool flags missing date, missing €, missing W1/W2 references, missing P&L headings.

E3. Time-Allocation Calculator with Mark-Weight Scaling

- Student selects subject and paper; tool generates a **target time per question** based on actual SEC mark distribution.
- "Sunk cost alarm" mode: simulates exam pressure, asks "do you keep writing on Q3 (already 12 minutes over) or move on?"
- Visualises remaining time vs remaining marks.

E4. "Spot the Trap" Interactive

- Per-subject library of past-paper questions with hidden traps:
  - English: a question with a modifier the student missed.
  - Maths: a question that says "find the value of x" (one answer expected) vs "find the values of x" (multiple). Revise
  - Chemistry: a definition question where an "isotope" answer is missing the key phrase.
  - Geography: a "process vs landform" trap.
  - French: a question expecting past tense disguised by tomorrow-tense vocabulary.

E5. Sub-Task Ceiling Visualiser (English-Focused)

- Drag a slider for Purpose (P) score; watch C and L scores get capped automatically.
- Shows what happens when a student writes a stunning essay on the wrong question.

E6. Sanity-Check Trainer (Maths/Science)

- Student inputs an answer to a calculation; tool asks: "is this order of magnitude reasonable?", "are units consistent?", "did you round only at the end?"
- Library of "absurd answers" examples (e.g. a force of 10^9 N to push a shopping trolley).

E7. Command-Word Matching Game

- Flashcard-style: shown a command word, student must match: required action, typical mark range, typical structural template, common error.

E8. Question-Choice Strategy Simulator

- Shows a full mock paper at start; gives student 5 minutes to mark "definitely", "maybe", "skip" on each question; then runs a simulation showing total marks obtainable under different choice strategies. Teaches that a part-answer to all required questions usually beats a perfect answer to fewer.

- Student is shown a question worth 10 marks; offered four levels of working (none / formula only / formula + substitution / full working with wrong answer / full working with right answer). Tool reveals what each scores under the actual marking scheme.

E10. SRP Identifier (Geography/History/Business)

- Student pastes a paragraph; tool segments it and asks the student to identify each SRP. Tool gives feedback on what counts as an SRP (factual, relevant, develops the question) and what doesn't (waffle, irrelevant, repeated).

E11. PCLM Comment Translator (English)

- Student pastes a marker comment ("Your purpose drifts in paragraph 3", "Your language is repetitive", "Your mechanics let you down"); tool explains which PCLM band is affected and what specifically to fix.

E12. Examiner Pet-Peeve Trainer

- Each subject has its set of pet peeves drawn from CERs. Multiple-choice mini-quiz: "Which of these is the perennial pet peeve in LC French oral?" → "Rote-learned blocks of memorised material."

E13. Diagram Annotation Practice (Geography/Biology/Physics)

- Student is given an unannotated diagram and a question; must drag annotation labels to the correct positions. Tool distinguishes labelled from annotated and shows the mark difference.

E14. Past-Paper Question Re-Writer (English/Irish/Languages)

- Student pastes a question; tool helps student rewrite it in their own words at the top of their answer (a habit the Chief Examiners explicitly recommend). Shows how rewritten questions tighten Purpose.

E15. Genre Identifier (English Composition / Question B)

- Student is given a Question B prompt; tool asks: is this a letter, blog, podcast, speech, article, diary, editorial? Shows genre conventions, length expectations, and the most common errors per genre.

E16. CAO Points / Grade-Boundary Calculator (Decision Tool)

- Inputs: target course points, current mock grades. Outputs: which subjects need bumping by 1 grade band; whether HL Maths bonus is realistic; whether dropping to OL costs net points.
- Shows the H6 → H7 cliff (still 37 points, no longer 0) — a major confidence-builder for HL students near the boundary.

E17. Marking-Scheme Phrase Match (Sciences)

- Sample answer is shown; student must select which phrases match the marking-scheme key phrases. Trains key-phrase awareness explicitly.

E18. Comparative Texts Linker (English)

- Three texts shown with a comparative mode (Theme, Cultural Context, General Vision and Viewpoint, Literary Genre). Student drags points to a 3-text grid; tool checks integration vs serial treatment.

E19. RSR Booklet Section Allocator (History)

- Word-count tracker that allocates words across Outline Plan / Sources / Essay / Review of Process. Warns of over-runs in any section.

E20. Oral-Exam Authenticity Coach (Languages/Irish)

- Records student's spoken answer (or accepts text). Tool flags repeated phrases, missing tense variation, over-rehearsed structures. Encourages personalisation.

E21. "Examiner View" Mode

- Side-by-side: a student answer and an examiner's annotation in the margin. Student must match annotations to PCLM categories or marking-scheme bands.

E22. Time-of-Day Pacing Coach (Maths/English/Geography Papers)

- Real-time exam simulator: gives the student a paper, sets the clock, throws prompts at calculated intervals: "10 minutes left for question 3"; "you should be finishing the comparative now". Trains internal pacing.

Recommendations

Stage 1 (build first) — the highest-leverage interactivity for a DEIS-school audience:

1. **Command Word Decoder** (E1) — applies to every subject; biggest pain point per CERs.
2. **PCLM Allocator** for English (E2) — the single most under-known marking convention.
3. **Time-Allocation Calculator** (E3) — corrects the universal "incomplete final answers" complaint.
4. **Examiner Pet-Peeve Trainer** (E12) — makes the perennial CER complaints concrete and memorable.
5. **CAO Points / Grade-Boundary Calculator** (E16) — connects effort to consequence; especially motivating for borderline H7/H6 students.

Stage 2 (add when Stage 1 is live): 6. SRP Identifier and Counter (E10) — Geography, History, Business. 7. Working-Shown Allocator (E9) — Maths/Science. 8. Sanity-Check Trainer (E6) — Maths/Science. 9. "Spot the Trap" library (E4). 10. Sub-Task Ceiling Visualiser (E5).

Stage 3 (subject-deep features): 11. Comparative Texts Linker (E18). 12. RSR Section Allocator (E19). 13. Marking-Scheme Phrase Match (E17). 14. Oral-Exam Authenticity Coach (E20).

Benchmarks that would change priorities:

- If user-test feedback shows DEIS students skipping Stage 1 because language is too dense, pivot to a more "show, don't tell" simulator-first model.
- If usage data shows English content underused but Maths content overused, expand quantitative-subject features first.
- If Chief Examiner Reports for any subject are updated post-2025, recheck the perennial-complaints list before Stage 2.

Content sourcing recommendations:

- Prioritise SEC published marking schemes (every year, every subject) for direct quotation — these are the authoritative source.
- Use Chief Examiner Reports (2008, 2011, 2012, 2013, 2015, 2016, 2017 most recent for various subjects) for examiner-voice quotations.
- Use NCCA Background Papers (2024, 2025) for syllabus context and trends.
- Use Studyclix, Folens, RTÉ Senior Cycle, The Institute of Education, and Dublin Academy of Education for teacher-voice operational tips that translate marking schemes into student-friendly language.
- Treat r/leavingcert as student-pain-point sourcing only, not as authority — it surfaces what students *find hard*, which is useful for prioritising features.

Editorial principles for DEIS audience:

- Never assume jargon. "PCLM" should be explained every time it first appears in a session.

- Make the consequence visible. A student who sees "this answer scored 36% because Purpose was 9/30" learns more than from any verbal explanation.
- Show real LC questions and real (anonymised) student answers wherever possible.
- Reward *attempting*, not perfection. The Maths attempt-mark mantra ("if you write nothing the examiner cannot award any marks") should be a recurring motif throughout the tab.

Caveats

- **Chief Examiner Reports are not annual.** They are published "periodically" — for English, the most recent before this dossier is 2013; for Maths 2015; for History 2017; for languages 2016; for Home Economics 2017; for Geography 2012. Any "recurring complaint" finding has to be triangulated with newer secondary commentary (RTÉ Learn, Irish Times exam-day reaction, teacher blogs). Oireachtas
- **Marking schemes are working documents.** The SEC explicitly states: "While a draft marking scheme is prepared in advance of the examination, the scheme is not finalised until examiners have applied it to candidates' work." This means precise mark allocations vary year to year; the *grammar* of the scheme (PCLM, SRPs, attempt/blunder/slip) is stable but specific weightings shift. The app should explain principles, not memorise specific mark-allocations. Thegeographypage
- **Senior Cycle reform is in progress.** A series of subjects are being redeveloped 2025–2029 with 40% project assessment + 60% written exam. English is delayed by a year (Fifth Year start 2027). Construction Studies becomes Construction Technology in 2026. The "Necessary Knowledge" tab should be future-flagged to update as new specifications come online. Wikipedia + 2
- **Some quoted figures from secondary sources may date.** The "63% of students get between D3 and C1 in Honours English" stat is from a 2014 blog post (pre-2017 grading reform); the current grading (H1–H8) has different distributions. Always re-check distribution claims against current SEC statistics. Leavingcertenglish Leavingcertenglish
- **Several search results returned non-Irish (UK GCSE, AQA, WJEC, Cambridge, A-Level) materials** during research; care has been taken to only cite Irish-LC-specific sources in the final dossier. UK exam conventions are similar but not identical (e.g. UK uses 9-1 grading, awards "QWC" not PCLM).
- **The interactive concepts in section E are design proposals, not validated educational interventions.** Any rollout should A/B test with a small DEIS cohort before mass deployment.
- **Student-generated content on Reddit and Studyclix should be treated as anecdotal** and triangulated against Chief Examiner Reports or marking schemes before being used in the app.

- **The Chief Examiner Reports are written for teachers, not students.** Translation into student-facing language is essential and a non-trivial editorial task; direct CER quotations should be paraphrased or contextualised, not dumped.
